

ADVANCED CENTRIC SYSTEMS B.V

COMPREHENSIVE CYBERSECURITY SERVICES

Product brochure

THE PROBLEM

Cyberwarfare, along with information warfare, have evolved into the fifth domain of warfare (with space, air, sea and land being the other four domains). In this era of mass on-line communication, states, governments, corporations, organizations, individuals and targets ranging from state infrastructures to home appliances face serious cyber threats.

Cybersecurity is currently an essential need in the context of national security as well as in everyday life as cyberterrorism, hacking, on-line fraud, denial of service, malware, ransomware, website defacing and other threats have become a real and present danger.

THE SOLUTION

ACS offers highly customized cybersecurity detection, management, containment, response and recovery resources specifically adapted to the client's needs and requirements.

Our comprehensive organizational cybersecurity solutions combine a physical infrastructure element (cybersecurity operations center) with an operational concept and on-going services that encompass all of the processes of a proactive cybersecurity approach.

KEY FEATURES & MAJOR ADVANTAGES

Key Features & Major Advantages:

- Wall-to-wall cybersecurity solutions
- Cyber operations centers – design, operational doctrine, operator training, equipment & on-going support
- On-going prevention, containment, response & recovery mechanisms
- Cyber forensics
- CERTs (Cyber Emergency Response Teams) – operational concepts, training & support
- Awareness, technical & functional training
- Operational concepts, policies & procedures
- 24/7 day-to-day management & support services
- Regulatory compliance
- Proven track record
